

Road Map

The "Favorite Things" application.

- Determine the future functionality of the application.
- The application consists of three images of your favorite things. When you click on the picture, a pop-up window appears with an explanation and title.
- Create repository, fill in README file.
- Create a database in PHPMyAdmin that includes 3 objects with ID, title, image and description.
- Create a mobile-first look for a site using html and SASS.
- Connect the site to the database using PHP.
- With the help of JS and fetch call, call data from the database.
- Test until the call succeeds.
- Create a lightbox using the covered material in the second semester.
- Connect database data to lightbox.
- Test for errors.
- Edit css styles.

During the work on the project, I noticed that the server did not respond to updates in a timely manner. This caused a lot of inconvenience. I'm not completely sure of the result I'm sending. Has the server been updated?
